

Dear FCC,

I spent 30 years of my life as an Electronic Design Engineer and Engineering Manager designing Cable TV Equipment trying to keep the equipment from not radiating and now someone thinks that they can injects RF onto a power line (antenna)and not radiate. I have to assume that these people are not Engineers because no RF Engineer would even think of doing something so ridiculous. This is something that doesn't even require testing but just some good old fashion analyze.

Lets get the Accountant out of the Engineering job and back counting beans.

Sincerely,
Ronald Oberloh
